TEE TELECOM CHURN

Key Findings

- **High customer attrition**: The overall churn rate is 26.5%, with 1,869 customers lost from a customer base of approximately 7,000.
- **Contract type matters**: Month-to-month customers have a 42.71% churn rate, compared with 11.27% for one-year contracts and 2.83% for two-year contracts.
- **Early-tenure customers are vulnerable**: The new-customer segment records the highest displayed churn rate at 47.44%, while churn declines to 9.51% among customers with 4–6 years of tenure.
- **Payment and internet service are key investigation areas**: Electronic-check customers have a 45.29% churn rate, while fiber-optic customers record 41.89%.
- **Potential revenue exposure:** Churned customers pay an average of $74 per month, $13 more than retained customers.
- **Elevated customer risk**: The risk analysis identifies 1,158 churned customers as critical risk and indicates that 47% of customers fall into the critical- or high-risk categories.

Strategic Recommendations

1. Improve onboarding and engagement during the first year of the customer relationship.
2. Encourage longer-term contracts through relevant loyalty incentives.
3. Investigate electronic-check payment behaviour and fiber-optic service dissatisfaction.
4. Review pricing and value perception among customers with high monthly charges.
5. Use risk scores to prioritise retention outreach and monitor campaign effectiveness.

Conclusion

TEE Telecom should adopt a proactive, data-driven customer retention strategy focused on new customers, month-to-month subscribers, electronic-check users, fiber-optic customers and those identified as high risk. Addressing the underlying reasons for churn and measuring the results of targeted retention campaigns can help reduce customer losses and protect recurring revenue.
